

SECURITY CONFIDENCE

GUARDIAN MX
POWERED BY MX LOGIC®

Your business needs effective, reliable protection from spam, viruses and other email threats. It doesn't need more administrative headaches! That's why thousands of small and medium-sized businesses (SMBs) choose the award-winning Guardian MX Email Defense Service powered by MX Logic®, which offers enterprise-grade service and performance, without enterprise-level complexity and cost.

The Guardian Defense Service works at the network perimeter to identify, quarantine, block, and strip suspect email messages before they can enter the messaging infrastructure, based on customer preferences established in the intuitive, easy-to-use control panel.

Guardian MX managed security services are fortified using a multi-layered strategy to successfully block threats allowing your business to benefit from greater overall protection and a reduction in costs.

SERVICE KEY BENEFITS:

- Easy activation, administration and use
- Affordable service package designed to meet SMB protection and budget requirements
- Comprehensive, effective defense against a wide range of email threats
- Continually updated protection for defense against the latest threats

GUARDIAN MX FEATURES:

- Advanced Spam Blocking
- Virus and Worm Scanning
- Content and Attachment Filtering
- Fraud Protection
- Email Attack Protection
- Outbound Message Filtering
- Sophisticated Quarantine Management
- Around-the-Clock Monitoring and Protection
- Fail Safe Disaster Recovery Service
- SMTP over TLS

FEATURES:

- Affordable service packages
- Phishing protection
- Powerful perimeter-based protection
- In-line message filtering
- Scalable and robust architecture
- The Stacked Classification Framework® spam detection engine
- Virus and worm engines
- Sophisticated spam engine
- Around-the-clock threat management
- Continuously updated
- Numerous industry awards
- Instant activation of service
- Managed and monitored for your business by Security Confidence Engineers

ADVANCED SPAM BLOCKING

Eliminates 90% of spam costs by blocking 99% of spam using patent-pending Stacked Classification Framework® spam detection system that combines the most effective spam-fighting filters and techniques in the industry, including award-winning Symantec Brightmail AntiSpam™ technology. This multi layered framework separately assesses and “votes” on the probability that an email is spam. Because each filtering method has unique strengths designed to identify specific threats, the combination creates one of the most accurate and comprehensive filtering processes in the industry.

VIRUS AND WORM SCANNING

Guardian MX detects, blocks and strips viruses and worms at the network perimeter before they can enter and damage your messaging infrastructure. The service offers comprehensive, 24 x 7 protection against email-borne viruses and worms, with triple protection that includes our proprietary worm detection technology and two of our three signature based anti-virus engines - Authentium®, McAfee® and Sophos®.

CONTENT AND ATTACHMENT FILTERING

Reduces corporate liability and risk through intelligent message processing that identifies, quarantines and blocks unwanted, malicious and sensitive content and attachments.

FRAUD PROTECTION

Keeps your employees safe from the risks of fraud and phishing scams.

EMAIL ATTACK PROTECTION

Conceals your network and critical messaging gateways from attack. Instantly blocks denial of service and other SMTP-based attacks, including dictionary harvest attacks, email bombs and channel flooding.

OUTBOUND MESSAGE FILTERING

Proactively protects your clients from harmful viruses and worms, and enforces your corporate email policy by filtering out specific content and attachments in messages leaving your corporate network.

SOPHISTICATED QUARANTINE MANAGEMENT

Guardian MX's safe, external quarantine and email-based quarantine reporting process significantly reduces email administration and false positives (legitimate email misidentified as spam).

AROUND-THE-CLOCK MONITORING AND PROTECTION

The Threat Center is a sophisticated streaming data environment where the global state of email communication is monitored, 24 hours a day, seven days a week, and provides its customers with real-time updates and protection.

FAIL SAFE DISASTER RECOVERY SERVICE

Incorporates complete back-up protection for your email server in case of an unforeseeable outage or malfunction, or during planned maintenance.

SMTP OVER TLS

Guardian MX accepts and filters encrypted inbound and outbound messages and delivers them across a secure tunnel when recipients are TLS enabled. If a recipient is unable to receive a TLS encrypted tunnel, the service will deliver the message via standard SMTP.
